

The difference is in the detail...

 **falgro[®] 4 SL gets it right.**

- **Reduces fruit set** - for less compact clusters and better airflow within bunches.
- **Increases berry size** - by promoting cell division and elongation at key stages of development.
- **Cultivar-specific flexibility** - Dosage and timing can be adjusted to suit different table grape varieties and growing regions.

Make every bunch count.

Talk to your Villa representative for guidance on timing, rates, and best practices in your area.
